CANTEX DRILLS 35 METERS OF 5 g/t GOLD

Kelowna, Canada – 9th November, 2011 – **Cantex Mine Development Corp.** (CD : TSXV) (“Cantex” or the “Company”) is pleased to announce drilling results from its Al Hariqah gold project.

The Company is also pleased to report that drilling continues after a break for the Ramadan holiday at both the Suwar nickel-copper-cobalt and Al Hariqah gold deposits under the direction of Canadian geologist Graham Janson.

Drilling results have recently been received from seven holes at the Al Hariqah gold project. Upper portions of the holes are typically drilled using percussion techniques and the holes are then extended with core drilling. Sample results are pending from a further 14 holes.

The following table presents significant results that have just been received along with any results previously reported from the same holes:

HOLE	Drilling Technique	Results	Length (m)	From (m)	To (m)	Gold Grade (g/t)
RDH-A	Percussion	Previously released	1.50	9.00	10.50	2.11
	Core	New	35.52	90.18	125.70	5.02
	Core	Including	3.70	106.38	110.08	33.42
	Core	New	3.83	138.10	141.93	0.57
RDH-B	Percussion	Previously released	10.50	10.50	21.00	1.29
	Percussion	Previously released	3.00	30.00	33.00	1.57
	Percussion	Previously released	4.50	36.00	40.50	0.34
	Percussion	Previously released	9.00	49.50	58.50	0.43
	Percussion	Previously released	13.50	66.00	79.50	0.43
	Core	New	13.03	99.20	112.23	1.17
RDH-C	Percussion	Previously released	78.00	0.0	78.0	3.08
	Percussion	Including	7.50	25.5	33.0	18.35
	Core	New	2.16	126.4	128.6	2.00
RDH-D	Percussion	Previously released	1.5	84	85.5	1.07
	Core	New	18.2	117.8	136	0.74
	Core	New	5.91	145.68	151.59	1.31
RDH-E	Percussion	New	13.50	0.00	13.50	0.63
	Percussion	New	1.50	76.50	78.00	0.32
RDH-F	Core	New	6.30	102.30	108.60	1.24

Drilling at the Al Hariqah project continues to intersect gold mineralization over significant lengths. Hole RDH-A intersected 35.52 meters of 5.02 g/t gold from 90.18 meters depth. Within this intersection was a 3.70 meter section which contains 33.42 g/t gold.

Drilling of the upper portion of RDH-C intersected 78 meters of 3.08 g/t gold from surface. Extending this hole by core drilling intersected 2 meters of 2.00 g/t gold from 126.4 meters depth.

Similarly extending the RDH-B percussion hole with core drilling techniques expanded the mineralization by intersecting 13.03 meters of 1.17 g/t gold.

Cantex is pleased with the continued intersection of anomalous gold mineralization at Al Hariqah. Once 28 holes are extended and the analysis is done, the Company will be in the position to complete a prefeasibility study on the Al Hariqah project.

Suwar

At the Suwar nickel-copper-cobalt project, drilling is targeting a high chargeability induced polarization geophysical anomaly.

Company President Chad Ulansky has been in Yemen working with the government to extend the deadline for which a prefeasibility study is to be completed on the Suwar project.

This press release has been prepared by Chad Ulansky P.Geol, a Qualified Person.

Signed,

Charles Fipke

Charles Fipke
Chairman
